Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

 RT "Nucleotide sequence of the gene for a fibronectin-binding protein
 from *Staphylococcus aureus*: use of this peptide sequence in the
 RT synthesis of biologically active peptides";
 RL Proc. Natl. Acad. Sci. U.S.A. 86:699-703(1989).
 CC -1- FUNCTION: The ability of bacteria to bind fibronectin has been
 CC proposed as a virulence factor enabling bacteria to colonize wound
 CC tissues and blood clots. Binding of plasma fibronectin to the
 CC bacterial surface might block adhesion receptors on *S. aureus*, thus
 CC representing an important defense mechanism against tissue
 CC invasion.
 CC -1- SUBCELLULAR LOCATION: Attached to the cell wall peptidoglycan by
 CC an amide bond (Potential).

XX Antibody that binds to fibronec-binding protein, preventing its
XX binding to fibronec - used to treat or prevent bacterial infection,
XX especially by Staphylococci and Streptococci.

XX Example 9; Page 110; 201pp; English.

The invention relates to antibodies that bind to a fibronec-binding domain of a fibronec-binding protein, and inhibit binding of the protein to fibronec. Also claimed are: (1) isolated peptides of a fibronec-binding protein that do not bind to fibronec; (2) fusion protein containing at least one peptide of a fibronec-binding protein linked to a second amino acid sequence; (3) nucleic acid encoding the isolated peptide of (1). Antibodies, the isolated peptides of (1) and the nucleic acids are all useful for immunisation (active or passive) and (by inhibiting binding of bacteria to fibronec) for preventing or treating infection in humans or other animals, particularly by staphylococci or

CC streptococci, e.g. meningitis, otitis media, pneumonia, endocarditis,
 CC mastitis in cattle, abortion in horses and many others. Since the
 CC antibodies block binding of bacteria, they should be effective against
 CC antibiotic-resistant strains, and may replace antibiotic therapy or
 CC increase its effectiveness. Sequences AAW65719-41 and AAW65658 represent
 CC peptides which were synthesised to span the D1 motif and the N-terminal
 CC 18 amino acids of D2, with each peptide overlapping by eight amino acids
 CC with the previous sequence

XX Antibody that binds to fibronectin-binding protein, preventing its
 PT binding to fibronectin - used to treat or prevent bacterial infection,
 PT especially by Staphylococci and Streptococci.
 XX

PS Disclosure; Page 173; 201pp; English.

XX The invention relates to antibodies that bind to a fibronectin-binding
 CC domain of a fibronectin-binding protein, and inhibit peptides of the
 CC protein to fibronectin. Also claimed are: (1) isolated peptides of a
 CC fibronectin-binding protein that do not bind to fibronectin; (2) fusion
 CC protein containing at least one peptide of a fibronectin-binding protein
 CC linked to a second amino acid sequence; (3) nucleic acid encoding the
 CC isolated peptide of (1). Antibodies, the isolated peptides of (1) and the
 CC nucleic acids are all useful for immunisation (active or passive) and (by
 CC inhibiting binding of bacteria to fibronectin) for preventing or treating
 CC infection in humans or other animals, particularly by staphylococci or
 CC streptococci, e.g. meningitis, otitis media, pneumonia, endocarditis,
 CC mastitis in cattle, abortion in horses and many others. Since the
 CC antibodies block binding of bacteria, they should be effective against
 CC antibiotic-resistant strains, and may replace antibiotic therapy or
 CC increase its effectiveness. The present sequence is shown in the

CC specification

 XX

PS Claim 11; Page 12; 23pp; English.

XX The peptide has fibronectin binding ability. It is useful for immunising
 CC ruminants against staphylococcal mastitis, pref. when used at 0.5-5
 CC micrograms/kg, using 3 doses given at 1-3 week intervals; for topical
 CC application to prevent wound infection, using an isotonic saline soln. of
 CC concn. 25-250 micrograms/ml; and, when immobilised on a carrier, for
 CC diagnosing staphylococcal infections. (Updated on 25-MAR-2003 to correct
 CC PF field.) (Updated on 25-MAR-2003 to correct PA field.)

 PT Hybrid DNA encoding Staphylococcus aureus fibronectin binding protein -
 PT useful for immunisation and topical application to prevent staphylococcal
 PT infections.
 PS
 PS Claim 11; Page 12; 23pp; English.
 XX
 CC The *S. aureus* fibronectin binding protein may be included in a hybrid
 CC protein. The protein may be used to immunise ruminants against
 CC staphylococcal mastitis, pref. when given at 0.5-5 microg/kg, using 3
 CC doses at 1-3 week intervals; and for topical applicm. to prevent wound
 CC infection, pref. using isotonic saline soln. of concn. 25-250 microg/mg.
 CC The DNA encoding the binding protein and the hybrid protein may be
 CC immobilised on a carrier and used to diagnose staphylococcal infections.

 PT Antibody that binds to fibronectin-binding protein, preventing its
 PT binding to fibronectin - used to treat or prevent bacterial infection,
 PT especially by Staphylococci and Streptococci.
 PS
 PS Example 2; Page 92; 201pp; English.
 XX
 CC The invention relates to antibodies that bind to a fibronectin-binding
 CC domain of a fibronectin-binding protein, and inhibit binding of the
 CC protein to fibronectin. Also claimed are: (1) isolated peptides of a
 CC fibronectin-binding protein that do not bind to fibronectin; (2) fusion
 CC protein containing at least one peptide of a fibronectin-binding protein
 CC linked to a second amino acid sequence; (3) nucleic acid encoding the
 CC isolated peptide of (1). Antibodies, the isolated peptides of (1) and the
 CC nucleic acids are all useful for immunisation (active or passive) and (by
 CC inhibiting binding of bacteria to fibronectin) for preventing or treating
 CC infection in humans or other animals, particularly by staphylococci or
 CC streptococci, e.g. meningitis, otitis media, pneumonia, endocarditis,
 CC mastitis in cattle, abortion in horses and many others. Since the
 CC antibodies block binding of bacteria, they should be effective against
 CC antibiotic-resistant strains, and may replace antibiotic therapy or
 CC increase its effectiveness. Sequences AAW65659-68 represent synthetic
 CC epitopes from the fibronectin binding domains DU and DI-D4 of the *S.*

 CC tissue regeneration procedures to prevent subsequent bacterial infection,
 CC and for irrigation of periodontal pockets. This sequence corresponds to
 CC amino acids 709-838 of the D1-D4 fibronectin binding domain of
 CC Staphylococcus aureus with a P838T substitution

 XX
 CC The invention provides bovine herpes virus-2 (BHV-2) based vectors that
 CC comprise at least one cytokine-encoding DNA sequence. The expression of
 CC cytokines in mammals can up-regulate immune responses to the immunogens.
 CC The cytokine is selected from interleukins (IL), colony stimulating
 CC factors (CSF), interferons (IFN) and tumour necrosis factors (TNF). The
 CC BHV-2 based vector or recombinant virus can be used as vaccines. They can
 CC be used for preventing or treating a mucosal disease in a subject, e.g.
 CC ruminants, cattle, sheep, goats, dogs, cats, horses, or man, particularly

CC mastitis in cows or breast cancers in humans. They can also be used for
 CC preventing or treating a stress-induced disease. The present sequence
 CC represents a S. aureus fibronectin binding protein binding domain
 CC sequence FNBA8, the gene cloned for use in this invention. The gene has
 CC 97.8 percent identity when compared to the previously published sequences
 CC FNBA and FNBB

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

 RT "Nucleotide sequence of the gene for a fibronectin-binding protein
 from *Staphylococcus aureus*: use of this peptide sequence in the
 RT synthesis of biologically active peptides."
 CC Proc. Natl. Acad. Sci. U.S.A. 86:699-703(1989).
 CC -1- FUNCTION: The ability of bacteria to bind fibronectin has been
 CC proposed as a virulence factor enabling bacteria to colonize wound
 CC tissues and blood clots. Binding of plasma fibronectin to the
 CC bacterial surface might block adhesion receptors on *S. aureus*, thus
 CC representing an important defense mechanism against tissue
 CC invasion.
 CC -1- SUBCELLULAR LOCATION: Attached to the cell wall peptidoglycan by
 CC an amide bond (Potential).

Antibody that binds to fibronec-binding protein, preventing its

binding to fibronec - used to treat or prevent bacterial infection,

especially by Staphylococci and Streptococci.

Example 9; Page 110; 20pp; English.

The invention relates to antibodies that bind to a fibronec-binding domain of a fibronec-binding protein, and inhibit binding of the protein to a fibronec. Also claimed are: (1) isolated peptides of a fibronec-binding protein that do not bind to fibronec; (2) fusion protein containing at least one peptide of a fibronec-binding protein linked to a second amino acid sequence; (3) nucleic acid encoding the isolated peptide of (1). Antibodies, the isolated peptides of (1) and the nucleic acids are all useful for immunisation (active or passive) and (by inhibiting binding of bacteria to fibronec) for preventing or treating infection in humans or other animals, particularly by staphylococci or

CC streptococci, e.g. meningitis, otitis media, pneumonia, endocarditis,
 CC mastitis in cattle, abortion in horses and many others. Since the
 CC antibodies block binding of bacteria, they should be effective against
 CC antibiotic-resistant strains, and may replace antibiotic therapy or
 CC increase its effectiveness. Sequences AAW65719-41 and AAW65658 represent
 CC peptides which were synthesised to span the D1 motif and the N-terminal
 CC 18 amino acids of D2, with each peptide overlapping by eight amino acids
 CC with the previous sequence

XX
CC The invention relates to antibodies that bind to a fibronectin-binding
CC domain of a fibronectin-binding protein, and inhibit binding of the
CC protein to fibronectin. Also claimed are: (1) isolated peptides of a
CC fibronectin-binding protein that do not bind to fibronectin; (2) fusion
CC protein containing at least one peptide of a fibronectin-binding protein
CC linked to a second amino acid sequence; (3) nucleic acid encoding the
CC isolated peptide of (1). Antibodies, the isolated peptides of (1) and the
CC nucleic acids are all useful for immunisation (active or passive) and (by
CC inhibiting binding of bacteria to fibronectin) for preventing or treating
CC infection in humans or other animals, particularly by staphylococci or
CC streptococci, e.g. meningitis, otitis media, pneumonia, endocarditis,
CC mastitis in cattle, abortion in horses and many others. Since the
CC antibodies block binding of bacteria, they should be effective against
CC antibiotic-resistant strains, and may replace antibiotic therapy or
CC increase its effectiveness. Sequences AAW65659-68 represent synthetic
CC epitopes from the fibronectin binding domains DU and DI-D4 of the S.

Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

4: p1r4:*

Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

 RA Signes C., Raucel G., Joenson K., Lindgren P.-E.,
 RA Anantharaman G.M., Hoeck M., Lindberg M.,
 RT "Nucleotide sequence of the gene for a fibronectin-binding protein
 from *Staphylococcus aureus*: use of this peptide sequence in the
 RT synthesis of biologically active peptides."
 RL Proc. Natl. Acad. Sci. U.S.A. 86:699-703(1989).
 CC -1- FUNCTION: The ability of bacteria to bind fibronectin has been
 CC proposed as a virulence factor enabling bacteria to colonize wound
 CC tissues and blood clots. Binding of plasma fibronectin to the
 CC bacterial surface might block adhesion receptors on *S. aureus*, thus
 CC representing an important defense mechanism against tissue
 CC invasion.
 CC -1- SUBCELLULAR LOCATION: Attached to the cell wall peptidoglycan by
 CC an amide bond (Potential).

XX Hoeoek M, Patti JM, House-Pompeo KL, Speciale P, Joh D;

PI McGavin MJ;

PT WPI; 1998-413816/35.

XX Antibody that binds to fibronec-binding protein, preventing its

XX binding to fibronec - used to treat or prevent bacterial infection,

XX especially by Staphylococci and Streptococci.

XX Example 9, Page 110; 201p; English.

XX The invention relates to antibodies that bind to a fibronec-binding

XX domain of a fibronec-binding protein, and inhibit binding of the

XX protein to fibronec. Also claimed are: (1) isolated peptides of a

XX fibronec-binding protein that do not bind to fibronec; (2) fusion

XX protein containing at least one peptide of a fibronec-binding protein

XX linked to a second amino acid sequence; (3) nucleic acid encoding the

XX isolated peptide of (1). Antibodies, the isolated peptides of (1) and the

XX nucleic acids are all useful for immunisation (active or passive) and (by

XX inhibiting binding of bacteria to fibronec) for preventing or treating

XX infection in humans or other animals, particularly by staphylococci or

CC streptococci, e.g. meningitis, otitis media, pneumonia, endocarditis,
 CC mastitis in cattle, abortion in horses and many others. Since the
 CC antibodies block binding of bacteria, they should be effective against
 CC antibiotic-resistant strains, and may replace antibiotic therapy or
 CC increase its effectiveness. Sequences AAW65719-41 and AAW65658 represent
 CC peptides which were synthesised to span the D1 motif and the N-terminal
 CC 18 amino acids of D2, with each peptide overlapping by eight amino acids
 CC with the previous sequence

PT Hybrid DNA encoding Staphylococcus aureus fibronectin binding protein -
 PT useful for immunisation and topical application to prevent staphylococcal
 PT infections.

PS Claim 11; Page 12; 23pp; English.

XX The peptide has fibronectin binding ability. It is useful for immunising
 CC ruminants against staphylococcal mastitis, pref. when used at 0.5-5
 CC micrograms/kg, using 3 doses given at 1-3 week intervals; for topical
 CC application to prevent wound infection, using an isotonic saline soln. of
 CC concn. 25-250 micrograms/ml; and, when immobilised on a carrier, for
 CC diagnosing staphylococcal infections. (Updated on 25-MAR-2003 to correct
 CC PF field.) (Updated on 25-MAR-2003 to correct PA field.)

 PT Antibody that binds to fibronectin-binding protein, preventing its
 PT binding to fibronectin - used to treat or prevent bacterial infection,
 PT especially by Staphylococci and Streptococci.
 XX
 PS Example 8; Page 102; 201pp; English.

XX The invention relates to antibodies that bind to a fibronectin-binding
 CC domain of a fibronectin-binding protein, and inhibit binding of the
 CC protein to fibronectin. Also claimed are: (1) isolated peptides of a
 CC fibronectin-binding protein that do not bind to fibronectin; (2) fusion
 CC protein containing at least one peptide of a fibronectin-binding protein
 CC linked to a second amino acid sequence; (3) nucleic acid encoding the
 CC isolated peptide of (1). Antibodies, the isolated peptides of (1) and the
 CC nucleic acids are all useful for immunisation (active or passive) and (by
 CC inhibiting binding of bacteria to fibronectin) for preventing or treating
 CC infection in humans or other animals, particularly by staphylococci or
 CC streptococci, e.g. meningitis, otitis media, pneumonia, endocarditis,
 CC mastitis in cattle, abortion in horses and many others. Since the
 CC antibodies block binding of bacteria, they should be effective against
 CC antibiotic-resistant strains, and may replace antibiotic therapy or
 CC increase its effectiveness. Sequences AAW65691-700 represent a series of
 CC synthetic peptides based on the D1 region of *S. aureus* fibronectin
 CC binding protein A. They were synthesised to contain mutations

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

SUMMARIES

N:Alternate names: photosystem II protein Cpl3

C:Species: Synechococcus sp.

C>Date: 31-Mar-1992 #sequence_revision 31-Mar-1992 #text_change 09-Jul-2004

C:Accession: JT0322

R:Golden, S.S.; Stearns, G.W.

Gene 67, 85-96, 1988

A>Title: Nucleotide sequence and transcript analysis of three photosystem II genes from

A:Accession: JT0322

A:Reference number: JT0321; MUID:88329748; PMID:3138165

A:Molecule type: DNA

A:Residues: 1-461 <GOL>

A:Cross-references: UNIPROT:P11004; GB:M20814; NID:g154587; PIDN:AA27359.1; PID:g154589
C:Comment: The major membrane protein complexes of photosynthetic thylakoids from oxygen
the D1 and D2 which house all of the cofactors of the reaction center, and two subunits
C:Genetics:

A:Gene: psbC

C:Superfamily: photosystem II chlorophyll a-binding protein psbC

C:Keywords: chlorophyll; photosynthesis; photosystem II; thylakoid

 RA Anantharamiah G.M., Hoeck M., Lindberg M.;
 RT "Nucleotide sequence of the gene for a fibronectin-binding protein
 from *Staphylococcus aureus*: use of this peptide sequence in the
 RT synthesis of biologically active peptides."
 RL Proc. Natl. Acad. Sci. U.S.A. 86:699-703(1989).
 CC -1- FUNCTION: The ability of bacteria to bind fibronectin has been
 CC proposed as a virulence factor enabling bacteria to colonize wound
 CC tissues and blood clots. Binding of plasma fibronectin to the
 CC bacterial surface might block adhesion receptors on *S. aureus*, thus
 CC representing an important defense mechanism against tissue
 CC invasion.
 CC -1- SUBCELLULAR LOCATION: Attached to the cell wall peptidoglycan by
 CC an amide bond (potential).
 CC This SWISS-PROT entry is copyright. It is produced through a collaboration
 CC between the Swiss Institute of Bioinformatics and the EMBL outstation -

Antibody that binds to fibronectin-binding protein, preventing its
binding to fibronectin - used to treat or prevent bacterial infection,
especially by Staphylococci and Streptococci.
Example 9; Page 110; 20pp; English.
The invention relates to antibodies that bind to a fibronectin-binding
domain of a fibronectin-binding protein, and inhibit binding of the
protein to fibronectin. Also claimed are: (1) isolated peptides of a
fibronectin-binding protein that do not bind to fibronectin; (2) fusion
protein containing at least one peptide of a fibronectin-binding protein
linked to a second amino acid sequence; (3) nucleic acid encoding the
isolated peptide of (1). Antibodies, the isolated peptides of (1) and the
nucleic acids are all useful for immunisation (active or passive) and (by
inhibiting binding of bacteria to fibronectin) for preventing or treating
infection in humans or other animals, particularly by staphylococci or

PT	Monoclonal antibody for treating or preventing staphylococcal infections
XX	binds specified fibronectin binding protein from Staphylococcus aureus.
XX	
PS	Claim 10; SEQ ID NO 2; 12pp; English.
XX	
CC	The invention relates to a new monoclonal antibody that binds fibronectin
CC	binding proteins from Staphylococcus aureus, including fibronectin
CC	binding protein A (Fnbpa) and fibronectin binding protein B (Fnbpb). The
CC	antibody is useful in treating, preventing or diagnosing staphylococcal
CC	infections in a human or animal. The antibody is capable of recognising
CC	Staphylococcus aureus with high affinity. It also inhibits binding of
CC	staphylococcal bacteria to fibronectin. This sequence represents a
CC	modified Fnbpb D2 peptide of the invention.

 CC protein containing at least one peptide of a fibronectin-binding protein
 CC linked to a second amino acid sequence; (3) nucleic acid encoding the
 CC isolated peptide of (1). Antibodies, the isolated peptides of (1) and the
 CC nucleic acids are all useful for immunisation (active or passive) and (by
 CC inhibiting binding of bacteria to fibronectin) for preventing or treating
 CC infection in humans or other animals, particularly by staphylococci or
 CC streptococci, e.g. meningitis, otitis media, pneumonia, endocarditis,
 CC mastitis in cattle, abortion in horses and many others. Since the
 CC antibodies block binding of bacteria, they should be effective against
 CC antibiotic-resistant strains, and may replace antibiotic therapy or
 CC increase its effectiveness. Sequences AAM65691-700 represent a series of
 CC synthetic peptides based on the DI region of S. aureus fibronectin
 CC binding protein A. They were synthesised to contain mutations

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

SUMMARIES

 RA Anantharamiah G.M., Hoeseck M., Lindberg M.,
 RT "Nucleotide sequence of the gene for a fibronectin-binding protein
 from *Staphylococcus aureus*: use of this peptide sequence in the
 RT synthesis of biologically active peptides."
 RL Proc. Natl. Acad. Sci. U.S.A. 86:699-703(1989).
 CC -1- FUNCTION: The ability of bacteria to bind fibronectin has been
 CC proposed as a virulence factor enabling bacteria to colonize wound
 CC tissues and blood clots. Binding of plasma fibronectin to the
 CC bacterial surface might block adhesion receptors on *S. aureus*, thus
 CC representing an important defense mechanism against tissue
 CC invasion.
 CC -1- SUBCELLULAR LOCATION: Attached to the cell wall peptidoglycan by
 CC an amide bond (Potential).

Example 8; Page 101; 201P; English.

The invention relates to antibodies that bind to a fibronectin-binding

domain of a fibronectin-binding protein, and inhibit binding of the

protein to a fibronectin. Also claimed are: (1) isolated peptides of a

protein containing at least one peptide of a fibronectin-binding

protein linked to a second amino acid sequence; (2) nucleic acid encoding the

isolated peptide of (1). Antibodies, the isolated peptides of (1) and the

nucleic acids are all useful for immunisation (active or passive) and (by

inhibiting binding of bacteria to fibronectin) for preventing or treating

infection in humans or other animals, particularly by staphylococci or

```
CC streptococci, e.g. meningitis, otitis media, pneumonia, endocarditis,
CC mastitis in cattle, abortion in horses and many others. Since the
CC antibodies block binding of bacteria, they should be effective against
CC antibiotic-resistant strains, and may replace antibiotic therapy or
CC increase its effectiveness. Sequences AAW65691-700 represent a series of
CC synthetic peptides based on the D1 region of S. aureus fibronectin
CC binding protein A. They were synthesised to contain mutations

XX Antibody that binds to fibronectin-binding protein, preventing its

PT binding to fibronectin - used to treat or prevent bacterial infection,

XX especially by Staphylococci and Streptococci.

XX Example 8; Page 102; 201pp; English.

CC The invention relates to antibodies that bind to a fibronectin-binding

CC domain of a fibronectin-binding protein, and inhibit binding of the

CC protein to fibronectin. Also claimed are: (1) isolated peptides of a

CC fibronectin-binding protein that do not bind to fibronectin; (2) fusion

CC protein containing at least one peptide of a fibronectin-binding protein

CC linked to a second amino acid sequence; (3) nucleic acid encoding the

CC isolated peptide of (1). Antibodies, the isolated peptides of (1) and the

CC nucleic acids are all useful for immunisation (active or passive) and (by

CC inhibiting binding of bacteria to fibronectin) for preventing or treating

CC infection in humans or other animals, particularly by staphylococci or

CC streptococci, e.g. meningitis, otitis media, pneumonia, endocarditis,

CC mastitis in cattle, abortion in horses and many others. Since the

CC antibodies block binding of bacteria, they should be effective against

CC antibiotic-resistant strains, and may replace antibiotic therapy or

CC increase its effectiveness. Sequences AAW65691-700 represent a series of

CC synthetic peptides based on the DI region of S. aureus fibronectin

CC binding protein A. They were synthesised to contain mutations

XX Polypeptide(s) derived from Staphylococcus aureus fibronectin binding
PT protein - inhibit binding of bacteria to extracellular matrix proteins,
PT for combating infection at the site of wounds and surgical implants, and
PT in oral hygiene.
XX
XX Claim 6; Page 24; 35pp; English.
XX
XX AAR90937-R90942 represent D3D4 polypeptides. These sequences correspond
CC to fragments of the Staphylococcus aureus fibronectin binding protein
CC (Fbp). This sequence corresponds to residues 18-130 of S.aureus J2385
CC Fbp, and also contains the D2 region, and a portion of the D1 region.
CC These sequences, and monoclonal antibodies against them can be used to
CC combat infection at the site of wounds, surgical implants and other in-
CC dwelling devices (such as catheters), and as adherent agents in oral
CC hygiene. They can also be used in the manufacture of a medicament for the
CC prevention of adhesion of bacteria to extracellular matrix proteins
CC present on in-dwelling devices or in wounds, or of oral pathogens to
CC similar proteins on surfaces in the oral cavity.

CC The fibronectin binding protein or polypeptide is useful in the
CC manufacture of oral hygiene compositions, eg. toothpaste, liquid
CC dentifrice, mouthwash or lozenge. They are useful to prevent the plaque-
CC related development of carious lesions, gingivitis, calculus or
CC periodontal disease and to combat oral cavity infections, e.g.
CC candidiasis. They may also be useful in oral surgery e.g. in guided
CC tissue regeneration procedures to prevent subsequent bacterial infection,
CC and for irrigation of periodontal pockets. This sequence corresponds to
CC amino acids 709-838 of the D1-D4 fibronectin binding domain of
CC Staphylococcus aureus with a P838T substitution

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

4: p1r4:*

Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

 RT "Nucleotide sequence of the gene for a fibronectin-binding protein
 from Staphylococcus aureus: use of this peptide sequence in the
 synthesis of biologically active peptides.";
 RL Proc. Natl. Acad. Sci. U.S.A. 86:699-703(1989).
 CC -! FUNCTION: The ability of bacteria to bind fibronectin has been
 proposed as a virulence factor enabling bacteria to colonize wound
 tissues and blood clots. Binding of plasma fibronectin to the
 bacterial surface might block adhesion receptors on S.aureus, thus
 representing an important defense mechanism against tissue
 invasion.
 CC -! SUBCELLULAR LOCATION: Attached to the cell wall peptidoglycan by
 an amide bond (potential).

XX
CC The invention relates to antibodies that bind to a fibrinectin-binding
CC domain of a fibrinectin-binding protein, and inhibit binding of the
CC protein to fibrinectin. Also claimed are: (1) isolated peptides of a
CC fibrinectin-binding protein that do not bind to fibrinectin; (2) fusion
CC protein containing at least one peptide of a fibrinectin-binding protein
CC linked to a second amino acid sequence; (3) nucleic acid encoding the
CC isolated peptide of (1). Antibodies, the isolated peptides of (1) and the
CC nucleic acids are all useful for immunisation (active or passive) and (by
CC inhibiting binding of bacteria to fibrinectin) for preventing or treating
CC infection in humans or other animals, particularly by staphylococci or

CC streptococci, e.g. meningitis, otitis media, pneumonia, endocarditis,
 CC mastitis in cattle, abortion in horses and many others. Since the
 CC antibodies block binding of bacteria, they should be effective against
 CC antibiotic-resistant strains, and may replace antibiotic therapy or
 CC increase its effectiveness. Sequences AAW65719-41 and AAW65658 represent
 CC peptides which were synthesised to span the D1 motif and the N-terminal
 CC 18 amino acids of D2, with each peptide overlapping by eight amino acids
 CC with the previous sequence

 XX XX
 PT Antibody that binds to fibronectin-binding protein, preventing its
 PT binding to fibronectin - used to treat or prevent bacterial infection,
 PT especially by Staphylococci and Streptococci.
 PS Example 8; Page 102; 201pp; English.
 XX XX
 PS The invention relates to antibodies that bind to a fibronectin-binding
 CC domain of a fibronectin-binding protein, and inhibit binding of the
 CC protein to fibronectin. Also claimed are: (1) isolated peptides of a
 CC fibronectin-binding protein that do not bind to fibronectin; (2) fusion
 CC protein containing at least one peptide of a fibronectin-binding protein
 CC linked to a second amino acid sequence; (3) nucleic acid encoding the
 CC isolated peptide of (1). Antibodies, the isolated peptides of (1) and the
 CC nucleic acids are all useful for immunisation (active or passive) and (by
 CC inhibiting binding of bacteria to fibronectin) for preventing or treating
 CC infection in humans or other animals, particularly by staphylococci or
 CC streptococci, e.g. meningitis, otitis media, pneumonia, endocarditis,
 CC mastitis in cattle, abortion in horses and many others. Since the
 CC antibodies block binding of bacteria, they should be effective against
 CC antibiotic-resistant strains, and may replace antibiotic therapy or
 CC increase its effectiveness. Sequences AAM65691-700 represent a series of
 CC synthetic peptides based on the D1 region of S. aureus fibronectin
 CC binding protein A. They were synthesised to contain mutations

PS	Claim 5; Page 32; 41pp; English.	
XX		
CC	Adherence of oral pathogens, particularly to tooth surfaces, can be	
CC	prevented by application of a fibronectin binding protein or polypeptide.	
CC	The fibronectin binding protein or polypeptide is useful in the	
CC	manufacture of oral hygiene compositions, eg. toothpaste, liquid	
CC	dentifrice, mouthwash or lozenge. They are useful to prevent the plaque-	
CC	related development of carious lesions, gingivitis, calculus or	
CC	periodontal disease and to combat oral cavity infections, e.g.	
CC	candidiasis. They may also be useful in oral surgery e.g. in guided	
CC	tissue regeneration procedures to prevent subsequent bacterial infection,	
CC	and for irrigation of periodontal pockets. This sequence corresponds to	
CC	amino acids 709-838 of the D1-D4 fibronectin binding domain of	
CC	Staphylococcus aureus

RT	"Nucleotide sequence of the gene for a fibronectin-binding protein			
RT	from Staphylococcus aureus: use of this peptide sequence in the			
RT	synthesis of biologically active peptides."			
RL	Proc. Natl. Acad. Sci. U.S.A. 86:699-703(1989).			
CC	- FUNCTION: The ability of bacteria to bind fibronectin has been			
CC	proposed as a virulence factor enabling bacteria to colonize wound			
CC	tissues and blood clots. Binding of plasma fibronectin to the			
CC	bacterial surface might block adhesion receptors on S.aureus, thus			
CC	representing an important defense mechanism against tissue			
CC	invasion.			
CC	- SUBCELLULAR LOCATION: Attached to the cell wall peptidoglycan by			
CC	an amide bond (Potential).

CC -1- FUNCTION: Involved in the regulation of cell growth. May stabilize
CC the active CDC2-cyclin B1 complex and thereby contribute to the
CC regulation of the cell cycle and the prevention of uncontrolled
CC cell proliferation. May act as tumor suppressor (By similarity).
CC -1- SUBUNIT: Binds ERF1G and CDC2 (By similarity).
CC -1- SUBCELLULAR LOCATION: Cytoplasmic; associated with the plasma
CC membrane and with microtubules. Detected in dendritic spines,
CC especially in the postsynaptic density (By similarity).
CC -1- PTM: Phosphorylated on serine residues. Hyperphosphorylated by the
CC cAMP-dependent kinase PKA during cell-cycle progression (By
CC similarity).
CC -1- SIMILARITY: Belongs to the LZTS family.

XX Antibody that binds to fibrinectin-binding protein, preventing its
XX binding to fibrinectin - used to treat or prevent bacterial infection,
XX especially by Staphylococci and Streptococci.
XX
XX Example 8; Page 101; 201pp; English.
XX
XX The invention relates to antibodies that bind to a fibrinectin-binding
XX domain of a fibrinectin-binding protein, and inhibit binding of the
XX protein to fibrinectin. Also claimed are: (1) isolated peptides of a
XX fibrinectin-binding protein that do not bind to fibrinectin; (2) fusion
XX protein containing at least one peptide of a fibrinectin-binding protein
XX linked to a second amino acid sequence; (3) nucleic acid encoding the
XX isolated peptide of (1). Antibodies, the isolated peptides of (1) and the
XX nucleic acids are all useful for immunisation (active or passive) and (by
XX inhibiting binding of bacteria to fibrinectin) for preventing or treating
XX infection in humans or other animals, particularly by staphylococci or

CC streptococci, e.g. meningitis, otitis media, pneumonia, endocarditis,
 CC mastitis in cattle, abortion in horses and many others. Since the
 CC antibodies block binding of bacteria, they should be effective against
 CC antibiotic-resistant strains, and may replace antibiotic therapy or
 CC increase its effectiveness. Sequences AAW65670-90 represent a series of
 CC synthetic peptides based on the D3 repeat of *S. aureus* fibronectin
 CC binding protein A. They were synthesised to contain a proline residue at
 CC each position through the sequence (ie a proline scan)

 PT New fibronectin binding peptide - combines with fusion peptide to form
 PT large antigen, used in immunisation, diagnosis and for treating wounds.
 PS
 PS Claim 1; Page 22; 33pp; English.
 XX
 CC The sequence comprises amino acids 17-33 of a tandem repeat, designated
 CC D3 of the fibronectin binding site of *Staphylococcus aureus* 8325-4 FnbP.
 CC The N-terminal DK may be replaced with H or K, and the C-terminal LKP may
 CC be replaced by either L, LP, or OH. The peptides were synthesised using
 CC standard methods and purified using reverse phase HPLC. The appropriate
 CC fractions were dialysed and lyophilised. Peptide sequencing was performed
 CC and the peptides digested and chemically modified by dihydroxypropylation
 CC of the amino side chain of lysine. The carboxylic side chains were
 CC converted to glycine methyl esters. The phenyl side chains of tyrosine
 CC residues were oxidised. Chemically modified peptide D3 was compared to
 CC unmodified D3. Lysine and tyrosine modifications only partially
 CC diminished its activity whereas modification of aspartic/glutamic
 CC residues resulted in complete loss of activity. The peptide can be used
 CC for the prevention or reduction of the risk of wound infection. The
 CC peptide can be used to create a large antigen for vaccinating ruminants
 CC against mastitis caused by *Staphylococcal* infections. It can also be used
 CC to diagnose *Staphylococcal* infections using ELISA or DNA probes. (Updated
 CC on 25-MAR-2003 to correct PA field.)

PT Modifying and attaching therapeutic peptides to albumin prevents
 PT peptidase degradation, useful for increasing length of in vivo activity.

XX Disclosure; Page 566; 733pp; English.

CC The present invention describes a modified therapeutic peptide (I)
 CC comprising a therapeutically active amino acid region (III) and a
 CC reactive group (II) (e.g. succinimidyl and maleimido groups) attached to
 CC a less therapeutically active amino acid region (IV), which covalently
 CC bonds with amino/hydroxyl/thiol groups on blood components to form a
 CC peptidase stabilised therapeutic peptide composed of 3-50 amino acids.
 CC (I) are useful for modifying therapeutic peptides e.g. hormones, growth
 CC factors and neurotransmitters, to protect them from peptidase activity in
 CC vivo for the treatment of various disorders. Endogenous therapeutic
 CC peptides are not suitable as drug candidates as they require frequent
 CC administration due to rapid degradation by peptidases in the body.
 CC Modifying and attaching therapeutic peptides to albumin prevents or
 CC reduces the action of peptidases to increase length of activity (half
 CC life) and specificity as bonding to large molecules decreases
 CC intracellular uptake and interference with physiological processes.
 CC AAB90829 to AAB92441 represent peptides which can be used in the
 CC exemplification of the present invention

XX
XX Identifying, isolating and producing hyperimmune serum-reactive antigens
XX from a pathogen, for preparing vaccine or medicament for treating or
XX preventing e.g. staphylococcal infections, comprises providing antibody
XX preparation.
XX
XX Example 7; Page 157; 252pp; English.
XX
XX The invention relates to a novel method for identifying, isolating and
XX producing hyperimmune serum-reactive antigens from a pathogen, tumour,
XX allergen, a tissue or host prone to auto-immunity, where the antigens are
XX used in a vaccine, comprises providing antibody preparation from a plasma
XX pool of a type of animal, or individual sera with antibodies against the
XX specific pathogen, tumour, allergen, tissue or host prone to auto-
XX immunity. The hyperimmune serum-reactive antigens comprising any of the

CC 62 sequences of 53-2261 amino acids fully defined in the specification,
CC or their hyperimmune fragments are useful for the manufacture of a
CC pharmaceutical preparation, particularly a vaccine against staphylococcal
CC infections or colonisation against *S. aureus* or *S. epidermidis*. The
CC preparation of antibodies is useful for the manufacture of a medicament
CC for treating or preventing staphylococcal infections or colonisation
CC against *S. aureus* or *S. epidermidis*. The antibody preparations may also
CC be used for diagnostic and imaging purposes. Other conditions that can be
CC treated include cancer, autoimmune diseases or infections caused by viral
CC (e.g. HIV, hepatitis A, B or C), fungal or protozoan pathogens. This
CC sequence represents a staphylococcal protein relating to the method for
CC identifying and producing pathogen specific antigens of the invention

XX preventing Staphylococcal infection, specifically an infection caused by
XX *S. aureus*, e.g. sepsis.
XX
XX Claim 1; SEQ ID NO 3554; 49pp; English.
XX
XX The invention relates to novel genes and encoded proteins from
XX *Staphylococcus aureus*. A composition comprising the *S. aureus* protein, a
XX nucleic acid encoding the protein, or an antibody to the protein, is
XX useful as a pharmaceutical, particularly as a vaccine for treating or
XX preventing infection due to *Staphylococcus bacteria*, specifically an
XX infection caused by *S. aureus*. The composition is particularly useful for
XX treating or preventing sepsis in a patient. The composition can also be
XX used for diagnostics. The protein is also used in an assay for enzymatic
XX studies and as a target for antibiotics. This sequence represents one of
XX the novel *S. aureus* proteins of the invention

PR Polynucleotide(s) and proteins derived from Staphylococcus aureus -

PT stored on computer readable medium and used in the production of anti-

PR S. aureus vaccines.

PS Claim 23; Page 3263-3267; 3271pp; English.

XX This sequence represents a Staphylococcus aureus protein sequence of the
CC invention. The DNA sequences encoding the S. aureus proteins are recorded
CC on a computer readable medium, preferably selected from a floppy or hard
CC disk, random access memory (RAM), read-only memory (ROM) or CD-ROM.
CC Homology searches using the S. aureus DNA sequences allows putative
CC functions to be assigned so that protein-encoding or regulatory regions
CC of commercial, therapeutic or industrial importance can be obtained.
CC Specifically, sequences which are likely to encode antigens have been
CC identified and these polypeptides can be used in a vaccine composition
CC against S. aureus infection. The polypeptides can also be used in a kit
CC for the immunodetection of S. aureus in a sample. S. aureus is implicated
CC in numerous human diseases, including cellulitis, eyelid infections, food
CC poisoning, osteomyelitis, skin and surgical wound infections, scalded
CC skin syndrome, toxic shock syndrome, etc. Organisms transformed with the
CC DNA sequences can be used for recombinant production of the polypeptides.
CC The new DNA sequences (and their fragments) are useful as primers or
CC probes for isolating homologues of any of the 5191 S. aureus DNA sequences
CC contained on the computer readable medium

PR New antisense nucleic acid, useful for identifying proteins or screening

PT for homologous nucleic acids required for cellular proliferation to

PR isolate candidate molecules for rational drug discovery programs.

PS Claim 25; SEQ ID NO 43778; 1766pp; English.

XX The invention relates to an isolated nucleic acid comprising any one of
CC the 623 antisense sequences given in the specification where expression
CC of the nucleic acid inhibits proliferation of a cell. Also included are:
CC (1) a vector comprising a promoter operably linked to the nucleic acid
CC encoding a polypeptide whose expression is inhibited by the antisense
CC nucleic acid; (2) a host cell containing the vector; (3) an isolated
CC polypeptide or its fragment whose expression is inhibited by the
CC antisense nucleic acid; (4) an antibody capable of specifically binding
CC the polypeptide; (5) producing the polypeptide; (6) inhibiting cellular
CC proliferation or the activity of a gene in an operon required for
CC proliferation; (7) identifying a compound that influences the activity of
CC the gene product or that has an activity against a biological pathway
CC required for proliferation, or that inhibits cellular proliferation; (8)
CC identifying a gene required for cellular proliferation or the biological
CC pathway in which a proliferation-regulated gene or its gene product lies
CC or a gene on which the test compound that inhibits proliferation of an
CC organism acts; (9) manufacturing an antibiotic; (10) profiling a
CC compound's activity; (11) a culture comprising strains in which the gene
CC product is overexpressed or underexpressed; (12) determining the extent
CC to which each of the strains is present in a culture or collection of
CC strains; or (13) identifying the target of a compound that inhibits the
CC proliferation of an organism. The antisense nucleic acids are useful for
CC identifying proteins or screening for homologous nucleic acids required
CC for cellular proliferation to isolate candidate molecules for rational
CC drug discovery programs, or for screening homologous nucleic acids
CC required for proliferation in cells other than S. aureus, S. typhimurium,
CC K. pneumoniae or P. aeruginosa. The present sequence is encoded by one of
CC the target prokaryotic essential genes. Note: The sequence data for this
CC patent did not form part of the printed specification, but was obtained
CC in electronic format directly from WIPO at

XX
XX antibiotics, comprise sequences of antisense nucleic acids.
XX
XX
XX Example 3; SEQ ID NO 5456; 511bp; English.
XX
XX
XX The invention relates to antisense inhibitors of genes essential to
XX
XX prokaryotic cellular proliferation, their use in identifying the genes,
XX
XX their use in the discovery of novel antibiotics, the essential genes
XX
XX themselves and the encoded proteins. The prokaryotes used are Escherichia
XX
XX coli, Staphylococcus aureus, Salmonella typhi, Klebsiella pneumoniae,
XX
XX Pseudomonas aeruginosa and Enterococcus faecalis. The invention is also
XX
XX useful for the identification of potential new targets for antibiotic
XX
XX development. The antisense nucleic acids can also be used to identify
XX
XX proteins used in proliferation, to express these proteins, and to obtain
XX
XX antibodies capable of binding to the expressed proteins. The proteins can
XX
XX be used to screen compounds in rational drug discovery programmes. The
XX
XX antisense nucleic acid sequence is also useful to screen for homologous
XX
XX nucleic acids which are required for cell proliferation in a wide variety
XX
XX of organisms. The present sequence represents an essential prokaryotic
XX
XX cellular proliferation protein. Note: The sequence data for this patent

Patent No. 5440014
GENERAL INFORMATION:
APPLICANT: Hook, Magnus
APPLICANT: MCGAVIN, Martin
APPLICANT: RAUCCI, Giuseppe
TITLE OF INVENTION: A FIBRONECTIN BINDING PEPTIDE

NUMBER OF SEQUENCES: 4
CORRESPONDENCE ADDRESS:
ADDRESSEE: Burne, Doane, Swecker & Mathis
STREET: P.O. Box 1404
CITY: Alexandria
STATE: Virginia
COUNTRY: United States
ZIP: 22313-1404
COMPUTER READABLE FORM:
MEDIUM TYPE: Floppy disk
COMPUTER: IBM PC compatible
OPERATING SYSTEM: PC-DOS/MS-DOS
SOFTWARE: Patentin Release #1.0, Version #1.30
CURRENT APPLICATION DATA:
APPLICATION NUMBER: US/08/234.622A

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

 PT Antibody that binds to fibronectin-binding protein, preventing its
 PT binding to fibronectin - used to treat or prevent bacterial infection,
 PT especially by Staphylococci and Streptococci.
 XX
 PS Example 2; Page 92; 201pp; English.

CC The invention relates to antibodies that bind to a fibronectin-binding
 CC domain of a fibronectin-binding protein, and inhibit binding of the
 CC protein to fibronectin. Also claimed are: (1) isolated peptides of a
 CC fibronectin-binding protein that do not bind to fibronectin; (2) fusion
 CC protein containing at least one peptide of a fibronectin-binding protein
 CC linked to a second amino acid sequence; (3) nucleic acid encoding the
 CC isolated peptide of (1). Antibodies, the isolated peptides of (1) and the
 CC nucleic acids are all useful for immunisation (active or passive) and (by
 CC inhibiting binding of bacteria to fibronectin) for preventing or treating
 CC infection in humans or other animals, particularly by staphylococci or
 CC streptococci, e.g. meningitis, otitis media, pneumonia, endocarditis,
 CC mastitis in cattle, abortion in horses and many others. Since the
 CC antibodies block binding of bacteria, they should be effective against
 CC antibiotic-resistant strains, and may replace antibiotic therapy or
 CC increase its effectiveness. Sequences AAW65659-68 represent synthetic

CC epitopes from the fibronectin binding domains DU and D1-D4 of the S.

 PT New fibronectin binding peptide - combines with fusion peptide to form
 PT large antigen, used in immunisation, diagnosis and for treating wounds.
 XX
 PS Claim 1; Page 22; 33pp; English.

CC The sequence comprises amino acids 17-33 of a tandem repeat, designated
 CC D3 of the fibronectin binding site of Staphylococcus aureus 8325-4 FBNP.
 CC The N-terminal DK may be replaced with H or K, and the C-terminal LKP may
 CC be replaced by either L, LP, or OH. The peptides were synthesised using
 CC standard methods and purified using reverse phase HPLC. The appropriate
 CC fractions were dialysed and lyophilised. Peptide sequencing was performed
 CC and the peptides digested and chemically modified by dihydropyridylation
 CC of the amino side chain of lysine. The carboxylic side chains were
 CC converted to glycine methyl esters. The phenyl side chains of tyrosine
 CC residues were oxidised. Chemically modified peptide D3 was compared to
 CC unmodified D3. Lysine and tyrosine modifications only partially
 CC diminished its activity whereas modification of aspartic/glutamic
 CC residues resulted in complete loss of activity. The peptide can be used
 CC for the prevention or reduction of the risk of wound infection. The
 CC peptide can be used to create a large antigen for vaccinating ruminants
 CC against mastitis caused by Staphylococcal infections. It can also be used
 CC to diagnose Staphylococcal infections using ELISA or DNA probes. (Updated
 CC on 25-MAR-2003 to correct PA field.)

PT Modifying and attaching therapeutic peptides to albumin prevents
 PT peptidase degradation, useful for increasing length of in vivo activity.

PS Disclosure; Page 566; 733pp; English.

XX The present invention describes a modified therapeutic peptide (I)
 CC comprising a therapeutically active amino acid region (III) and a
 CC reactive group (II) (e.g. succinimide) and maleimide groups) attached to
 CC a less therapeutically active amino acid region (IV), which covalently
 CC bonds with amino/hydroxyl/thiol groups on blood components to form a
 CC peptide stabilised therapeutic peptide composed of 3-50 amino acids.
 CC (I) are useful for modifying therapeutic peptides e.g. hormones, growth
 CC factors and neurotransmitters, to protect them from peptidase activity in
 CC vivo for the treatment of various disorders. Endogenous therapeutic
 CC peptides are not suitable as drug candidates as they require frequent
 CC administration due to rapid degradation by peptidases in the body.
 CC Modifying and attaching therapeutic peptides to albumin prevents or
 CC reduces the action of peptidases to increase length of activity (half
 CC life) and specifically as bonding to large molecules decreases
 CC intracellular uptake and interference with physiological processes.
 CC AAB90829 to AAB92441 represent peptides which can be used in the
 CC exemplification of the present invention

XX Identifying, isolating and producing hyperimmune serum-reactive antigens
PT from a pathogen, for preparing vaccine or medicament for treating or
PT preventing e.g. staphylococcal infections, comprises providing antibody
PT preparation.
XX
XX Example 7, Page 157; 252pp; English.
XX
PS The invention relates to a novel method for identifying, isolating and
CC producing hyperimmune serum-reactive antigens from a pathogen, tumour,
CC allergen, a tissue or host prone to auto-immunity, where the antigens are
CC used in a vaccine, comprises providing antibody preparation from a plasma
CC pool of a type of animal, or individual sera with antibodies against the
CC specific pathogen, tumour, allergen, tissue or host prone to auto-
CC immunity. The hyperimmune serum-reactive antigens comprising any of the

CC 62 sequences of 53-2261 amino acids fully defined in the specification,
CC or their hyperimmune fragments are useful for the manufacture of a
CC pharmaceutical preparation, particularly a vaccine against staphylococcal
CC infections or colonisation against *S. aureus* or *S. epidermidis*. The
CC preparation of antibodies is useful for the manufacture of a medicament
CC for treating or preventing staphylococcal infections or colonisation
CC against *S. aureus* or *S. epidermidis*. The antibody preparations may also
CC be used for diagnostic and imaging purposes. Other conditions that can be
CC treated include cancer, autoimmune diseases or infections caused by viral
CC (e.g. HIV, hepatitis A, B or C), fungal or protozoan pathogens. This
CC sequence represents a staphylococcal protein relating to the method for
CC identifying and producing pathogen specific antigens of the invention

XX
XX Claim 1; SEQ ID NO 3554; 49pp; English.
XX
XX The invention relates to novel genes and encoded proteins from
CC Staphylococcus aureus. A composition comprising the *S. aureus* protein, a
CC nucleic acid encoding the protein, or an antibody to the protein, is
CC useful as a pharmaceutical, particularly as a vaccine for treating or
CC preventing infection due to Staphylococcus bacteria, specifically an
CC infection caused by *S. aureus*. The composition is particularly useful for
CC treating or preventing sepsis in a patient. The composition can also be
CC used for diagnostics. The protein is also used in an assay for enzymatic
CC studies and as a target for antibiotics. This sequence represents one of
CC the novel *S. aureus* proteins of the invention

DR WPI; 1997-374922/35.

PT polynucleotide(s) and proteins derived from Staphylococcus aureus -
 stored on computer readable medium and used in the production of anti-
 S. aureus vaccines.

PS Claim 23; Page 3263-3267; 3271pp; English.

CC This sequence represents a Staphylococcus aureus protein sequence of the
 invention. The DNA sequences encoding the S. aureus proteins are recorded
 on a computer readable medium, preferably selected from a floppy or hard
 disk, random access memory (RAM), read-only memory (ROM) or CD-ROM.

CC Homology searches using the S. aureus DNA sequences allows putative
 functions to be assigned so that protein-encoding or regulatory regions

CC of commercial, therapeutic or industrial importance can be obtained.
 Specifically, sequences which are likely to encode antigens have been

CC identified and these polypeptides can be used in a vaccine composition
 against S. aureus infection. The polypeptides can also be used in a kit

CC for the immunodetection of S. aureus in a sample. S. aureus is implicated
 in numerous human diseases, including cellulitis, eyelid infections, food

CC poisoning, osteomyelitis, skin and surgical wound infections, scalded
 skin syndrome, toxic shock syndrome, etc. Organisms transformed with the

CC DNA sequences can be used for recombinant production of the polypeptides.
 The new DNA sequences (and their fragments) are useful as primers or

CC probes for isolating homologues of any of the 5191 S. aureus DNA sequences
 confined on the computer readable medium

PT Staphylococcus aureus fibronectin binding protein D2D3 polypeptide -
 useful for combating infection at wound sites, surgical implants, etc.
 and as antiadherent agent in oral hygiene.

PS Claim 5; Page 26; 38pp; English.

CC The present sequence is the S. aureus fibronectin binding protein
 CC polypeptide D2D3, which can be used to prevent adhesion of (e.g. gram
 CC positive) bacteria, to extra-cellular matrix proteins on in-dwelling
 CC devices, e.g. catheters or in wounds. D2D3 can also be used to prevent

CC oral pathogens from binding to extra-cellular matrix proteins, in the
 CC oral cavity. D2D3 was found to be effective at inhibiting S. aureus 8325-

CC 4, and 120 adhesion to fibronectin coated PMMA coverslips, at a min.
 CC adhesion inhibitor concn. of 10 microg/ml. D2D3 was derived from the D2

CC and D3 regions of the S. aureus J2385 (NCIMB 40532) fibronectin binding
 CC protein

Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

CC The invention relates to antibodies that bind to a fibronectin-binding
CC domain of a fibronectin-binding protein, and inhibit binding of the
CC protein to a fibronectin. Also claimed are: (1) isolated peptides of a
CC fibronectin-binding protein that do not bind to fibronectin; (2) fusion
CC protein containing at least one peptide of a fibronectin-binding protein
CC linked to a second amino acid sequence; (3) nucleic acid encoding the
CC isolated peptide of (1). Antibodies, the isolated peptides of (1) and the
CC nucleic acids are all useful for immunisation (active or passive) and (b)
CC inhibiting binding of bacteria to fibronectin for preventing or treating
CC infection in humans or other animals, particularly by staphylococci or

CC streptococci, e.g. meningitis, otitis media, pneumonia, endocarditis,
 CC mastitis in cattle, abortion in horses and many others. Since the
 CC antibodies block binding of bacteria, they should be effective against
 CC antibiotic-resistant strains, and may replace antibiotic therapy or
 CC increase its effectiveness. Sequences AAW65670-90 represent a series of
 CC synthetic peptides based on the D3 repeat of *S. aureus* fibronectin
 CC binding protein A. They were synthesised to contain a proline residue at
 CC each position through the sequence (ie a proline scan)

XX
XX Antibody that binds to fibronectin-binding protein, preventing its
PT binding to fibronectin - used to treat or prevent bacterial infection,
PT especially by Staphylococci and Streptococci.
XX
XX Example 8; Page 100; 201pp; English.
XX
XX The invention relates to antibodies that bind to a fibronectin-binding
CC domain of a fibronectin-binding protein, and inhibit binding of the
CC protein to fibronectin. Also claimed are: (1) isolated peptides of a
CC fibronectin-binding protein that do not bind to fibronectin; (2) fusion
CC protein containing at least one peptide of a fibronectin-binding protein
CC linked to a second amino acid sequence; (3) nucleic acid encoding the
CC isolated peptide of (1). Antibodies, the isolated peptides of (1) and the
CC nucleic acids are all useful for immunisation (active or passive) and (by
CC inhibiting binding of bacteria to fibronectin) for preventing or treating
CC infection in humans or other animals, particularly by staphylococci or
CC streptococci, e.g. meningitis, otitis media, pneumonia, endocarditis,
CC mastitis in cattle, abortion in horses and many others. Since the
CC antibodies block binding of bacteria, they should be effective against
CC antibiotic-resistant strains, and may replace antibiotic therapy or
CC increase its effectiveness. Sequences AAM65670-90 represent a series of
CC synthetic peptides based on the D3 repeat of S. aureus fibronectin
CC binding protein A. They were synthesised to contain a proline residue at
CC each position throughout the sequence (ie a proline scan)

 XX
 XX New fibronectin binding peptide - combines with fusion peptide to form
 XX large antigen, used in immunisation, diagnosis and for treating wounds.
 XX
 XX Claim 1; Page 22; 33pp; English.
 XX
 XX The sequence comprises amino acids 17-33 of a tandem repeat, designated
 XX D3 of the fibronectin binding site of *Staphylococcus aureus* 8325-4 FMBP.
 XX The N-terminal DK may be replaced with H or K, and the C-terminal LKP may
 XX be replaced by either L, LP, or OH. The peptides were synthesised using
 XX standard methods and purified using reverse phase HPLC. The appropriate
 XX fractions were dialysed and lyophilised. Peptide sequencing was performed
 XX of the amino side chain of lysine. The carboxylic side chains were
 XX converted to glycine methyl esters. The phenyl side chains of tyrosine
 XX residues were oxidised. Chemically modified peptide D3 was compared to
 XX unmodified D3. Lysine and tyrosine modifications only partially
 XX diminished its activity whereas modification of aspartic/glutamic
 XX residues resulted in complete loss of activity. The peptide can be used
 XX for the prevention or reduction of the risk of wound infection. The
 XX peptide can be used to create a large antigen for vaccinating ruminants
 XX against mastitis caused by *Staphylococcal* infections. It can also be used
 XX to diagnose *Staphylococcal* infections using ELISA or DNA probes. (Updated
 XX on 25-MAR-2003 to correct PA field.)

 XX
 XX Modifying and attaching therapeutic peptides to albumin prevents
 XX peptidase degradation, useful for increasing length of in vivo activity.
 XX
 XX Disclosure; Page 566; 733pp; English.
 XX
 XX The present invention describes a modified therapeutic peptide (I)
 XX comprising a therapeutically active amino acid region (II) and a
 XX reactive group (II) (e.g. succinimidy1 and maleimido groups) attached to
 XX a less therapeutically active amino acid region (IV), which covalently
 XX bonds with amino/hydroxy1/thiol groups on blood components to form a
 XX peptide stable therapeutic peptide composed of 3-50 amino acids.
 XX (I) are useful for modifying therapeutic peptides e.g. hormones, growth
 XX factors and neurotransmitters, to protect them from peptidase activity in
 XX vivo for the treatment of various disorders. Endogenous therapeutic
 XX peptides are not suitable as drug candidates as they require frequent
 XX administration due to rapid degradation by peptidases in the body.
 XX Modifying and attaching therapeutic peptides to albumin prevents or
 XX reduces the action of peptidases to increase length of activity (half
 XX life) and specificity as bonding to large molecules decreases
 XX intracellular uptake and interference with physiological processes.
 XX AAB90829 to AAB92441 represent peptides which can be used in the
 XX exemplification of the present invention

XX
XX Example 2; Fig 8A-B; 130pp; English.
XX
CC The invention provides bovine herpes virus-2 (BHV-2) based vectors that
CC comprise at least one cytokine-encoding DNA sequence. The expression of
CC cytokines in mammals can up-regulate immune responses to the immunogens.
CC The cytokine is selected from interleukins (IL), colony stimulating
CC factors (CSF), interferons (IFN) and tumour necrosis factors (TNF). The
CC BHV-2 based vector or recombinant virus can be used as vaccines. They can
CC be used for preventing or treating a mucosal disease in a subject, e.g.
CC ruminants, cattle, sheep, goats, dogs, cats, horses, or man, particularly
CC mastitis in cows or breast cancers in humans. They can also be used for

CC preventing or treating a stress-induced disease. The present sequence
CC represents the binding domain of a previously published S. aureus
CC fibronectin binding protein A (FnBA) sequence. The FnB binding domain
CC gene sequence FNBAH, cloned for use in this invention has 97.8 percent
CC identity when compared to the previously published FnBA and Fnbb gene
CC sequences

XX Disclosure; Page 91; 143pp; English.
XX
XX This protein comprises Staphylococcus aureus fibronectin-binding
CC microbial surface component recognising adhesive matrix molecule (MSCRAMM)
CC derivative pOD, plus a vector-derived N-terminal peptide. The invention
CC relates to claimed nucleic acid sequences (see AAV193436-38) encoding S.
CC aureus collagen binding protein (CBP) epitopes M17, M31 and M55 (see
CC AAW31552-54) that confer protection against S. aureus infection. CBP
CC protein and antigenic epitopes are contemplated for use in the treatment
CC of pathological infections, especially to prevent bacterial adhesion to
CC collagen. The epitopes are also contemplated for use in the preparation
CC of vaccines and as carrier proteins in vaccine formulations, as well as
CC in the formulation of compositions for the prevention of S. aureus
CC infection. pCF33 and pOD (see AAW31556) were used to raise anti-MSCRAMM

CC polyclonal antibodies used in passive immunisation against bovine
 CC mastitis. (Updated on 25-MAR-2003 to correct PI field.) (Updated on 27-
 CC AUG-2003 to correct OS field.)

Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

  "Nucleotide sequence of the gene for a fibronectin-binding protein
  from Staphylococcus aureus: use of this peptide sequence in the
  synthesis of biologically active peptides.";
  Proc. Natl. Acad. Sci. U.S.A. 86:699-703(1989).
RL
CC -I- FUNCTION: The ability of bacteria to bind fibronectin has been
  proposed as a virulence factor enabling bacteria to colonize wound
  tissues and blood clots. Binding of plasma fibronectin to the
  bacterial surface might block adhesion receptors on S.aureus, thus
  representing an important defense mechanism against tissue
  invasion.
CC -I- SUBCELLULAR LOCATION: Attached to the cell wall peptidoglycan by
  an amide bond (Potential).

CC -1- SIMILARITY: Belongs to the G-protein coupled receptor 2 family.

CC		IN-TM7 subfamily.	
CC	-1-	SIMILARITY: Contains 1 GPS domain.	
CC	-1-	SIMILARITY: Contains 1 immunoglobulin-like domain.	
CC	-1-	SIMILARITY: Contains 4 leucine-rich (LRR) repeats.

XX
CC The invention relates to antibodies that bind to a fibrinectin-binding
CC domain of a fibrinectin-binding protein, and inhibit binding of the
CC protein to a fibrinectin. Also claimed are: (1) isolated peptides of a
CC fibrinectin-binding protein that do not bind to fibrinectin; (2) fusion
CC protein containing at least one peptide of a fibrinectin-binding protein
CC linked to a second amino acid sequence; (3) nucleic acid encoding the
CC isolated peptide of (1). Antibodies, the isolated peptides of (1) and the
CC nucleic acids are all useful for immunisation (active or passive) and (by
CC inhibiting binding of bacteria to fibrinectin) for preventing or treating
CC infection in humans or other animals, particularly by staphylococci or

```

CC streptococci, e.g. meningitis, otitis media, pneumonia, endocarditis,
CC mastitis in cattle, abortion in horses and many others. Since the
CC antibodies block binding of bacteria, they should be effective against
CC antibiotic-resistant strains, and may replace antibiotic therapy or
CC increase its effectiveness. Sequences AAW65691-700 represent a series of
CC synthetic peptides based on the D1 region of S. aureus fibronectin
CC binding protein A. They were synthesised to contain mutations

XX
CC Adherence of oral pathogens, particularly to tooth surfaces, can be
CC prevented by application of a fibronectin binding protein or polypeptide.
CC The fibronectin binding protein or polypeptide is useful in the
CC manufacture of oral hygiene compositions, eg. toothpaste, liquid
CC dentifrice, mouthwash or lozenge. They are useful to prevent the plaque-
CC related development of carious lesions, gingivitis, calculus or
CC periodontal disease and to combat oral cavity infections, eg.
CC candidiasis. They may also be useful in oral surgery e.g. in guided
CC tissue regeneration procedures to prevent subsequent bacterial infection,
CC and for irrigation of periodontal pockets. This sequence corresponds to
CC amino acids 709-838 of the D1-D4 fibronectin binding domain of
CC Staphylococcus aureus

XX

CC The invention provides bovine herpes virus-2 (BHV-2) based vectors that

CC comprise at least one cytokine-encoding DNA sequence. The expression of

CC cytokines in mammals can up-regulate immune responses to the immunogens.

CC The cytokine is selected from interleukins (IL), colony stimulating

CC factors (CSF), interferons (IFN) and tumour necrosis factors (TNF). The

CC BHV-2 based vector or recombinant virus can be used as vaccine. They can

CC be used for preventing or treating a mucosal disease in a subject, e.g.

CC ruminants, cattle, sheep, goats, dogs, cats, horses, or man, particularly

CC mastitis in cows or breast cancers in humans. They can also be used for

CC preventing or treating a stress-induced disease. The present sequence

CC represents a S. aureus fibronectin binding protein binding domain

CC sequence FnBAB, the gene cloned for use in this invention. The gene has

CC 97.8 percent identity when compared to the previously published sequences

XX Disclosure; Page 91; 143pp; English.

XX This protein comprises Staphylococcus aureus fibronectin-binding
 CC microbial surface component recognising adhesive matrix molecule (MSCRAMM)
 CC derivative POD, plus a vector-derived N-terminal peptide. The invention
 CC relates to claimed nucleic acid sequences (see AAT93436-38) encoding S.
 CC aureus collagen binding protein (CBP) epitopes M17, M31 and M55 (see
 CC AAW31552-54) that confer protection against S. aureus infection. CBP
 CC protein and antigenic epitopes are contemplated for use in the treatment
 CC of pathological infections, especially to prevent bacterial adhesion to
 CC collagen. The epitopes are also contemplated for use in the preparation
 CC of vaccines and as carrier proteins in vaccine formulations, as well as
 CC in the formulation of compositions for the prevention of S. aureus
 CC infection. pCF33 and POD (see AAW31556) were used to raise anti-MSCRAMM
 CC polyclonal antibodies used in passive immunisation against bovine
 CC mastitis. (Updated on 25-MAR-2003 to correct PI field.) (Updated on 27-
 CC AUG-2003 to correct OS field.)

 PT Prevention of adherence of oral pathogens in the oral cavity, partic.
 PT tooth surfaces - by application of a fibronectin binding protein or
 PT polypeptide or a monoclonal antibody or fragment against it.
 XX
 PS Claim 5; Page 31; 41pp; English.
 CC Adherence of oral pathogens, particularly to tooth surfaces, can be
 CC prevented by application of a fibronectin binding protein or polypeptide.
 CC The fibronectin binding protein or polypeptide is useful in the
 CC manufacture of oral hygiene compositions, eg. toothpaste, liquid
 CC dentifrice, mouthwash or lozenge. They are useful to prevent the plaque-
 CC related development of carious lesions, gingivitis, calculus or
 CC periodontal disease and to combat oral cavity infections, e.g.
 CC candidiasis. They may also be useful in oral surgery e.g. in guided
 CC tissue regeneration procedures to prevent subsequent bacterial infection,
 CC and for irrigation of periodontal pockets. This sequence corresponds to
 CC amino acids 709-886 of the D1-D4 fibronectin binding domain of
 CC Staphylococcus aureus

 XX
 PT Polynucleotide(s) and proteins derived from Staphylococcus aureus -
 PT stored on computer readable medium and used in the production of anti-
 PT S.aureus vaccines.
 XX
 PS Claim 23; Page 3259-3261; 3271pp; English.
 CC This sequence represents a Staphylococcus aureus protein sequence of the
 CC invention. The DNA sequences encoding the S.aureus proteins are recorded
 CC on a computer readable medium, preferably selected from a floppy or hard
 CC disk, random access memory (RAM), read-only memory (ROM) or CD-ROM.
 CC Homology searches using the S.aureus DNA sequences allows putative
 CC functions to be assigned so that protein-encoding or regulatory regions
 CC of commercial, therapeutic or industrial importance can be obtained.
 CC Specifically, sequences which are likely to encode antigens have been
 CC identified and these polypeptides can be used in a vaccine composition
 CC against S.aureus infection. The polypeptides can also be used in a kit
 CC for the immunodetection of S.aureus in a sample. S.aureus is implicated
 CC in numerous human diseases, including cellulitis, eyelid infections, food
 CC poisoning, osteomyelitis, skin and surgical wound infections, scalded
 CC skin syndrome, toxic shock syndrome, etc. Organisms transformed with the
 CC DNA sequences can be used for recombinant production of the polypeptides.
 CC The new DNA sequences (and their fragments) are useful as primers or
 CC probes for isolating homologues of any of the 5191 S.aureus DNA sequences
 CC contained on the computer readable medium

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

 RT "Nucleotide sequence of the gene for a fibronectin-binding protein
 from Staphylococcus aureus: use of this peptide sequence in the
 synthesis of biologically active peptides."
 RT Proc. Natl. Acad. Sci. U.S.A. 86:699-703(1989).
 RL -1- FUNCTION: The ability of bacteria to bind fibronectin has been
 CC proposed as a virulence factor enabling bacteria to colonize wound
 CC tissues and blood clots. Binding of plasma fibronectin to the
 CC bacterial surface might block adhesion receptors on S.aureus, thus
 CC representing an important defense mechanism against tissue
 CC invasion.
 CC -1- SUBCELLULAR LOCATION: Attached to the cell wall peptidoglycan by
 CC an amide bond (Potential).

CC streptococci, e.g. meningitis, otitis media, pneumonia, endocarditis,
 CC mastitis in cattle, abortion in horses and many others. Since the
 CC antibodies block binding of bacteria, they should be effective against
 CC antibiotic-resistant strains, and may replace antibiotic therapy or
 CC increase its effectiveness. Sequences AAW65691-700 represent a series of
 CC synthetic peptides based on the D1 region of *S. aureus* fibronectin
 CC binding protein A. They were synthesised to contain mutations

 PS Example 2; Page 92; 201pp; English.
 XX

CC The invention relates to antibodies that bind to a fibronectin-binding
 CC domain of a fibronectin-binding protein, and inhibit binding of the
 CC protein to fibronectin. Also claimed are: (1) isolated peptides of a
 CC fibronectin-binding protein that do not bind to fibronectin; (2) fusion
 CC protein containing at least one peptide of a fibronectin-binding protein
 CC linked to a second amino acid sequence; (3) nucleic acid encoding the
 CC isolated peptide of (1). Antibodies, the isolated peptides of (1) and the
 CC nucleic acids are all useful for immunisation (active or passive) and (by
 CC inhibiting binding of bacteria to fibronectin) for preventing or treating
 CC infection in humans or other animals, particularly by *staphylococci* or
 CC streptococci, e.g. meningitis, otitis media, pneumonia, endocarditis,
 CC mastitis in cattle, abortion in horses and many others. Since the
 CC antibodies block binding of bacteria, they should be effective against
 CC antibiotic-resistant strains, and may replace antibiotic therapy or
 CC increase its effectiveness. Sequences AAW65659-68 represent synthetic
 CC epitopes from the fibronectin binding domains DU and D1-D4 of the *S.*

XX

XX The invention provides bovine herpes virus-2 (BHV-2) based vectors that

CC comprise at least one cytokine-encoding DNA sequence. The expression of

CC cytokines in mammals can up-regulate immune responses to the immunogens.

CC The cytokine is selected from interleukins (IL), colony stimulating

CC factors (CSF), interferons (IFN) and tumour necrosis factors (TNF). The

CC BHV-2 based vector or recombinant virus can be used as vaccine. They can

CC be used for preventing or treating a mucosal disease in a subject, e.g.

CC ruminants, cattle, sheep, goats, dogs, cats, horses, or man, particularly

CC mastitis in cows or breast cancers in humans. They can also be used for

CC preventing or treating a stress-induced disease. The present sequence

CC represents a S. aureus fibronectin binding protein binding domain

CC sequence FnBAB, the gene cloned for use in this invention. The gene has

CC 97.8 percent identity when compared to the previously published sequences

XX Disclosure; Page 91; 143pp; English.

XX This protein comprises Staphylococcus aureus fibronectin-binding
 CC microbial surface component recognising adhesive matrix molecule (MSCRAMM)
 CC derivative pOD, plus a vector-derived N-terminal peptide. The invention
 CC relates to claimed nucleic acid sequences (see AAT93436-38) encoding S.
 CC aureus collagen binding protein (CBP) epitopes M17, M31 and M55 (see
 CC AAW1552-54) that confer protection against S. aureus infection. CBP
 CC protein and antigenic epitopes are contemplated for use in the treatment
 CC of pathological infections, especially to prevent bacterial adhesion to
 CC collagen. The epitopes are also contemplated for use in the preparation
 CC of vaccines and as carrier proteins in vaccine formulations, as well as
 CC in the formulation of compositions for the prevention of S. aureus
 CC infection. pCR33 and pOD (see AAW1556) were used to raise anti-MSCRAMM
 CC polyclonal antibodies used in passive immunisation against bovine
 CC mastitis. (Updated on 25-MAR-2003 to correct PI field.) (Updated on 27-
 CC AUG-2003 to correct OS field.)

 PT Prevention of adherence of oral pathogens in the oral cavity, partic.
 PT tooth surfaces - by application of a fibronectin binding protein or
 PT polypeptide or a monoclonal antibody or fragment against it.
 XX
 PS Claim 5; Page 31; 41pp; English.
 XX
 CC Adherence of oral pathogens, particularly to tooth surfaces, can be
 CC prevented by application of a fibronectin binding protein or polypeptide.
 CC The fibronectin binding protein or polypeptide is useful in the
 CC manufacture of oral hygiene compositions, eg. toothpaste, liquid
 CC dentifrice, mouthwash or lozenge. They are useful to prevent the plaque-
 CC related development of carious lesions, gingivitis, calculus or
 CC periodontal disease and to combat oral cavity infections, e.g.
 CC candidiasis. They may also be useful in oral surgery e.g. in guided
 CC tissue regeneration procedures to prevent subsequent bacterial infection,
 CC and for irrigation of periodontal pockets. This sequence corresponds to
 CC amino acids 709-886 of the D1-D4 fibronectin binding domain of
 CC Staphylococcus aureus

 XX
 PT Polynucleotide(s) and proteins derived from Staphylococcus aureus -
 PT stored on computer readable medium and used in the production of anti-
 PT *S. aureus* vaccines.
 XX
 PS Claim 23; Page 3259-3261; 3271pp; English.
 XX
 CC This sequence represents a Staphylococcus aureus protein sequence of the
 CC invention. The DNA sequences encoding the *S. aureus* proteins are recorded
 CC on a computer readable medium, preferably selected from a floppy or hard
 CC disk, random access memory (RAM), read-only memory (ROM) or CD-ROM.
 CC Homology searches using the *S. aureus* DNA sequences allows putative
 CC functions to be assigned so that protein-encoding or regulatory regions
 CC of commercial, therapeutic or industrial importance can be obtained.
 CC Specifically, sequences which are likely to encode antigens have been
 CC identified and these polypeptides can be used in a vaccine composition
 CC against *S. aureus* infection. The polypeptides can also be used in a kit
 CC for the immunodetection of *S. aureus* in a sample. *S. aureus* is implicated
 CC in numerous human diseases, including cellulitis, eyelid infections, food
 CC poisoning, osteomyelitis, skin and surgical wound infections, scalded
 CC skin syndrome, toxic shock syndrome, etc. Organisms transformed with the
 CC DNA sequences can be used for recombinant production of the polypeptides.
 CC The new DNA sequences (and their fragments) are useful as primers or
 CC probes for isolating homologues of any of the 5191 *S. aureus* DNA sequences
 CC contained on the computer readable medium

Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

 RT Proc. Natl. Acad. Sci. U.S.A. 86:699-703(1989).
 RL
 CC -1- FUNCTION: The ability of bacteria to bind fibronectin has been
 proposed as a virulence factor enabling bacteria to colonize wound
 tissues and blood clots. Binding of plasma fibronectin to the
 bacterial surface might block adhesion receptors on S.aureus, thus
 representing an important defense mechanism against tissue
 invasion.
 CC -1- SUBCELLULAR LOCATION: Attached to the cell wall peptidoglycan by
 an amide bond (potential).

PT Antibody that binds to fibronectin-binding protein, preventing its
PT binding to fibronectin - used to treat or prevent bacterial infection,
PT especially by Staphylococci and Streptococci.
XX
PS Example 2; Page 92; 201pp; English.
XX
CC The invention relates to antibodies that bind to a fibronectin-binding
CC domain of a fibronectin-binding protein, and inhibit binding of the
CC protein to fibronectin. Also claimed are: (1) isolated peptides of a
CC fibronectin-binding protein that do not bind to fibronectin; (2) fusion
CC protein containing at least one peptide of a fibronectin-binding protein
CC linked to a second amino acid sequence; (3) nucleic acid encoding the
CC isolated peptide of (1). Antibodies, the isolated peptides of (1) and the
CC nucleic acids are all useful for immunisation (active or passive) and (by
CC inhibiting binding of bacteria to fibronectin) for preventing or treating
CC infection in humans or other animals, particularly by staphylococci or
CC streptococci, e.g. meningitis, otitis media, pneumonia, endocarditis,
CC mastitis in cattle, abortion in horses and many others. Since the
CC antibodies block binding of bacteria, they should be effective against
CC antibiotic-resistant strains, and may replace antibiotic therapy or
CC increase its effectiveness. Sequences AAW65659-68 represent synthetic
CC epitopes from the fibronectin binding domains DU and D1-D4 of the S.

XX

The invention provides bovine herpes virus-2 (BHV-2) based vectors that comprise at least one cytokine-encoding DNA sequence. The expression of cytokines in mammals can up-regulate immune responses to the immunogens. The cytokine is selected from interleukins (IL), colony stimulating factors (CSF), interferons (IFN) and tumour necrosis factors (TNF). The BHV-2 based vector or recombinant virus can be used as vaccines. They can be used for preventing or treating a mucosal disease in a subject, e.g. rumenitis, cattle, sheep, goats, dogs, cats, horses, or man, particularly mastitis in cows or breast cancers in humans. They can also be used for preventing or treating a stress-induced disease. The present sequence

 PT polypeptide or a monoclonal antibody or fragment against it.
 XX
 PS Claim 5; Page 31; 41pp; English.
 XX
 CC Adherence of oral pathogens, particularly to tooth surfaces, can be
 CC prevented by application of a fibronectin binding protein or polypeptide.
 CC The fibronectin binding protein or polypeptide is useful in the
 CC manufacture of oral hygiene compositions, eg. toothpaste, liquid
 CC dentifrice, mouthwash or lozenge. They are useful to prevent the plaque-
 CC related development of carious lesions, gingivitis, calculus or
 CC periodontal disease and to combat oral cavity infections, e.g.
 CC candidiasis. They may also be useful in oral surgery e.g. in guided
 CC tissue regeneration procedures to prevent subsequent bacterial infection,
 CC and for irrigation of periodontal pockets. This sequence corresponds to
 CC amino acids 709-886 of the D1-D4 fibronectin binding domain of
 CC Staphylococcus aureus

 PT Polynucleotide(s) and proteins derived from *Staphylococcus aureus* -
 PT stored on computer readable medium and used in the production of anti-
 PT *S. aureus* vaccines.
 XX
 PS Claim 23; Page 3259-3261; 3271pp; English.
 XX
 CC This sequence represents a *Staphylococcus aureus* protein sequence of the
 CC invention. The DNA sequences encoding the *S. aureus* proteins are recorded
 CC on a computer readable medium, preferably selected from a floppy or hard
 CC disk, random access memory (RAM), read-only memory (ROM) or CD-ROM.
 CC Homology searches using the *S. aureus* DNA sequences allows putative
 CC functions to be assigned so that protein-encoding or regulatory regions
 CC of commercial, therapeutic or industrial importance can be obtained.
 CC Specifically, sequences which are likely to encode antigens have been
 CC identified and these polypeptides can be used in a vaccine composition
 CC against *S. aureus* infection. The polypeptides can also be used in a kit
 CC for the immunodetection of *S. aureus* in a sample. *S. aureus* is implicated
 CC in numerous human diseases, including cellulitis, eyelid infections, food
 CC poisoning, osteomyelitis, skin and surgical wound infections, scalded
 CC skin syndrome, toxic shock syndrome, etc. Organisms transformed with the
 CC DNA sequences can be used for recombinant production of the polypeptides.
 CC The new DNA sequences (and their fragments) are useful as primers or
 CC probes for isolating homologues of any of the 5191 *S. aureus* DNA sequences
 CC contained on the computer readable medium

Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

 RA Anantharamiah G.M., Hoelck M., Lindberg M.;
 RT "Nucleotide sequence of the gene for a fibronectin-binding protein
 from Staphylococcus aureus: use of this peptide sequence in the
 synthesis of biologically active peptides".
 RT Proc. Natl. Acad. Sci. U.S.A. 86:699-703(1989).
 RL -1- FUNCTION: The ability of bacteria to bind fibronectin has been
 proposed as a virulence factor enabling bacteria to colonize wound
 tissues and blood clots. Binding of plasma fibronectin to the
 bacterial surface might block adhesion receptors on S.aureus, thus
 representing an important defense mechanism against tissue
 invasion.

-1- SUBCELLULAR LOCATION: Attached to the cell wall peptidoglycan by
 an amide bond (potential).

XX Antibody that binds to fibronectin-binding protein, preventing its
XX binding to fibronectin - used to treat or prevent bacterial infection,
XX especially by Staphylococci and Streptococci.
XX Example 8, Page 102, 201pp; English.

The invention relates to antibodies that bind to a fibronectin-binding domain of a fibronectin-binding protein, and inhibit binding of the protein to fibronectin. Also claimed are: (1) isolated peptides of a fibronectin-binding protein that do not bind to fibronectin; (2) fusion protein containing at least one peptide of a fibronectin-binding protein linked to a second amino acid sequence; (3) nucleic acid encoding the isolated peptide of (1). Antibodies, the isolated peptides of (1) and the nucleic acids are all useful for immunisation (active or passive) and (b) inhibiting binding of bacteria to fibronectin for preventing or treating infection in humans or other animals, particularly by staphylococci or

CC streptococci, e.g. meningitis, otitis media, pneumonia, endocarditis,
 CC mastitis in cattle, abortion in horses and many others. Since the
 CC antibodies block binding of bacteria, they should be effective against
 CC antibiotic-resistant strains, and may replace antibiotic therapy or
 CC increase its effectiveness. Sequences AAM6561-700 represent a series of
 CC synthetic peptides based on the D1 region of *S. aureus* fibronectin
 CC binding protein A. They were synthesised to contain mutations

XX CC The invention provides bovine herpes virus-2 (BHV-2) based vectors that

CC comprise at least one cytokine-encoding DNA sequence. The expression of

CC cytokines in mammals can up-regulate immune responses to the immunogens.

CC The cytokine is selected from interleukins (IL), colony stimulating

CC factors (CSF), interferons (IFN) and tumour necrosis factors (TNF). The

CC BHV-2 based vector or recombinant virus can be used as vaccines. They can

CC be used for preventing or treating a mucosal disease in a subject, e.g.

CC ruminants, cattle, sheep, goats, dogs, cats, horses, or man, particularly

CC mastitis in cows or breast cancers in humans. They can also be used for

CC preventing or treating a stress-induced disease. The present sequence

CC represents a S. aureus fibronectin binding protein binding domain

CC sequence FnBAB, the gene cloned for use in this invention. The gene has

CC 97.8 percent identity when compared to the previously published sequences

CC FnBA and FnBB

XX This protein comprises Staphylococcus aureus fibronectin-binding

XX microbial surface component recognising adhesive matrix molecule (MSCRAMM)

XX derivative pQD, plus a vector-derived N-terminal peptide. The invention

XX relates to claimed nucleic acid sequences (see A193436-38) encoding S.

XX aureus collagen binding protein (CBP) epitopes M17, M31 and M55 (see

XX AAW31552-54) that confer protection against S. aureus infection. CBP

XX protein and antigenic epitopes are contemplated for use in the treatment

XX of pathological infections, especially to prevent bacterial adhesion to

XX collagen. The epitopes are also contemplated for use in the preparation

XX of vaccines and as carrier proteins in vaccine formulations, as well as

XX in the formulation of compositions for the prevention of S. aureus

XX infection. pCP33 and pQD (see AAW31556) were used to raise anti-MSCRAMM

XX polyclonal antibodies used in passive immunisation against bovine

PT Fibronectin binding protein and monoclonal antibodies specific for Fbp -
 PT useful to prevent adherence of Gram-positive bacteria to indwelling
 PT devices or wounds.
 XX
 PS Disclosure; Page 29-30; 40pp; English.
 CC
 CC Polypeptides corresponding to residues G709-T886 plus PRVYPT, G709-
 CC P836(P838T) and G709-P838 (AAR58805-07, respectively) of *S. aureus* J2385
 CC (NCIMB 40532) Fbp type A fibronectin binding domain D1-D4 region
 CC (AAR58808) were expressed in *E. coli* BL21(DE4) and used to raise Mabs
 CC specific for Fbp. (Updated on 25-MAR-2003 to correct PN field.)

 PT Prevention of adherence of oral pathogens in the oral cavity, partic.
 PT tooth surfaces - by application of a fibronectin binding protein or
 PT polypeptide or a monoclonal antibody or fragment against it.
 PS
 XX Claim 5; Page 31; 41pp; English.
 XX
 CC Adherence of oral pathogens, particularly to tooth surfaces, can be
 CC prevented by application of a fibronectin binding protein or polypeptide.
 CC The fibronectin binding protein or polypeptide is useful in the
 CC manufacture of oral hygiene compositions, eg. toothpaste, liquid
 CC dentifrice, mouthwash or lozenge. They are useful to prevent the plaque-
 CC related development of carious lesions, gingivitis, calculus or
 CC candidiasis. They may also be useful in oral cavity infections, e.g.
 CC periodontitis. They may also be useful in oral surgery e.g. in guided
 CC tissue regeneration procedures to prevent subsequent bacterial infection,
 CC and for irrigation of periodontal pockets. This sequence corresponds to
 CC amino acids 709-886 of the D1-D4 fibronectin binding domain of
 CC Staphylococcus aureus

 XX
 PD Polynucleotide(s) and proteins derived from *Staphylococcus aureus* -
 PT stored on computer readable medium and used in the production of anti-
 PT *S. aureus* vaccines.
 XX
 PS Claim 23; Page 3259-3261; 3271pp; English.
 XX
 CC This sequence represents a *Staphylococcus aureus* protein sequence of the
 CC invention. The DNA sequences encoding the *S. aureus* proteins are recorded
 CC on a computer readable medium, preferably selected from a floppy or hard
 CC disk, random access memory (RAM), read-only memory (ROM) or CD-ROM.
 CC Homology searches using the *S. aureus* DNA sequences allows putative
 CC functions to be assigned so that protein-encoding or regulatory regions
 CC of commercial, therapeutic or industrial importance can be obtained.
 CC Specifically, sequences which are likely to encode antigens have been
 CC identified and these polypeptides can be used in a vaccine composition
 CC against *S. aureus* infection. The polypeptides can also be used in a kit
 CC for the immunodetection of *S. aureus* in a sample. *S. aureus* is implicated
 CC in numerous human diseases, including cellulitis, eyelid infections, food
 CC poisoning, osteomyelitis, skin and surgical wound infections, scalded
 CC skin syndrome, toxic shock syndrome, etc. Organisms transformed with the
 CC DNA sequences can be used for recombinant production of the polypeptides.
 CC The new DNA sequences (and their fragments) are useful as primers or
 CC probes for isolating homologues of any of the 5191 *S. aureus* DNA sequences
 CC contained on the computer readable medium

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

XX
XX Antibody that binds to fibronectin-binding protein, preventing its
XX binding to fibronectin - used to treat or prevent bacterial infection,
XX especially by Staphylococci and Streptococci.
XX
XX Example 2; Page 92; 201pp; English.
XX
XX The invention relates to antibodies that bind to a fibronectin-binding
XX domain of a fibronectin-binding protein, and inhibit binding of the
XX protein to fibronectin. Also claimed are: (1) isolated peptides of a
XX fibronectin-binding protein that do not bind to fibronectin; (2) fusion
XX protein containing at least one peptide of a fibronectin-binding protein
XX linked to a second amino acid sequence; (3) nucleic acid encoding the
XX isolated peptide of (1). Antibodies, the isolated peptides of (1) and the
XX nucleic acids are all useful for immunisation (active or passive) and (by
XX inhibiting binding of bacteria to fibronectin) for preventing or treating
XX infection in humans or other animals, particularly by staphylococci or
XX streptococci, e.g. meningitis, otitis media, pneumonia, endocarditis,
XX mastitis in cattle, abortion in horses and many others. Since the
XX antibodies block binding of bacteria, they should be effective against
XX antibiotic-resistant strains, and may replace antibiotic therapy or
XX increase its effectiveness. Sequences AAW6561-68 represent synthetic
XX epitopes from the fibronectin binding domains DU and D1-D4 of the S.

XX PS Example 2; Fig 8A-B; 130pp; English.

CC The invention provides bovine herpes virus-2 (BHV-2) based vectors that
CC comprise at least one cytokine-encoding DNA sequence. The expression of
CC cytokines in mammals can up-regulate immune responses to the immunogens.
CC The cytokine is selected from interleukins (IL), colony stimulating
CC factors (CSF), interferons (IFN) and tumour necrosis factors (TNF). The
CC BHV-2 based vector or recombinant virus can be used as vaccines. They can
CC be used for preventing or treating a mucosal disease in a subject, e.g.
CC ruminants, cattle, sheep, goats, dogs, cats, horses, or man, particularly
CC mastitis in cows or breast cancers in humans. They can also be used for
CC preventing or treating a stress-induced disease. The present sequence

CC represents a S. aureus fibronectin binding protein binding domain
CC sequence FnBAB, the gene cloned for use in this invention. The gene has
CC 97.8 percent identity when compared to the previously published sequences
CC FnBA and FnBB

XX with Staphylococcus aureus.

XX Disclosure; Page 91; 143pp; English.

XX This protein comprises Staphylococcus aureus fibronectin-binding
 XX microbial surface component recognising adhesive matrix molecule (MSCRAMM)
 XX derivative pOD, plus a vector-derived N-terminal peptide. The invention
 XX relates to claimed nucleic acid sequences (see AAT93436-38) encoding S.
 XX aureus collagen binding protein (CBP) epitopes M17, M31 and M55 (see
 XX AAW1552-54) that confer protection against S. aureus infection. CBP
 XX protein and antigenic epitopes are contemplated for use in the treatment
 XX of pathological infections, especially to prevent bacterial adhesion to
 XX collagen. The epitopes are also contemplated for use in the preparation
 XX of vaccines and as carrier proteins in vaccine formulations, as well as
 XX in the formulation of compositions for the prevention of S. aureus
 XX infection. pCR33 and pOD (see AAW31556) were used to raise anti-MSCRAMM
 XX polyclonal antibodies used in passive immunisation against bovine
 XX mastitis. (Updated on 25-MAR-2003 to correct PI field.) (Updated on 27-
 XX AUG-2003 to correct OS field.)

 PT Polynucleotide(s) and proteins derived from Staphylococcus aureus -
 PT stored on computer readable medium and used in the production of anti-
 PT S. aureus vaccines.
 XX
 XX Claim 23; Page 3259-3261; 3271pp; English.
 XX
 XX This sequence represents a Staphylococcus aureus protein sequence of the
 CC invention. The DNA sequences encoding the S. aureus proteins are recorded
 CC on a computer readable medium, preferably selected from a floppy or hard
 CC disk, random access memory (RAM), read-only memory (ROM) or CD-ROM.
 CC Homology searches using the S. aureus DNA sequences allows putative
 CC functions to be assigned so that protein-encoding or regulatory regions
 CC of commercial, therapeutic or industrial importance can be obtained.
 CC Specifically, sequences which are likely to encode antigens have been
 CC identified and these polypeptides can be used in a vaccine composition
 CC against S. aureus infection. The polypeptides can also be used in a kit
 CC for the immunodetection of S. aureus in a sample. S. aureus is implicated
 CC in numerous human diseases, including cellulitis, eyelid infections, food
 CC poisoning, osteomyelitis, skin and surgical wound infections, scalded
 CC skin syndrome, toxic shock syndrome, etc. Organisms transformed with the
 CC DNA sequences can be used for recombinant production of the polypeptides.
 CC The new DNA sequences (and their fragments) are useful as primers or
 CC probes for isolating homologues of any of the 5191 S. aureus DNA sequences
 CC contained on the computer readable medium

Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

 RL

-1- FUNCTION: The ability of bacteria to bind fibronectin has been
 proposed as a virulence factor enabling bacteria to colonize wound
 tissues and blood clots. Binding of plasma fibronectin to the
 bacterial surface might block adhesion receptors on S.aureus, thus
 representing an important defense mechanism against tissue
 invasion.

PT Antibody that binds to fibronectin-binding protein, preventing its
PT binding to fibronectin - used to treat or prevent bacterial infection,
PT especially by Staphylococci and Streptococci.
XX
PS Example 2; Page 92; 201pp; English.
XX
CC The invention relates to antibodies that bind to a fibronectin-binding
CC domain of a fibronectin-binding protein, and inhibit binding of the
CC protein to fibronectin. Also claimed are: (1) isolated peptides of a
CC fibronectin-binding protein that do not bind to fibronectin; (2) fusion
CC protein containing at least one peptide of a fibronectin-binding protein
CC linked to a second amino acid sequence; (3) nucleic acid encoding the
CC isolated peptide of (1). Antibodies, the isolated peptides of (1) and the
CC nucleic acids are all useful for immunisation (active or passive) and (by
CC inhibiting binding of bacteria to fibronectin) for preventing or treating
CC infection in humans or other animals, particularly by staphylococci or
CC streptococci, e.g. meningitis, otitis media, pneumonia, endocarditis,
CC mastitis in cattle, abortion in horses and many others. Since the
CC antibodies block binding of bacteria, they should be effective against
CC antibiotic-resistant strains, and may replace antibiotic therapy or
CC increase its effectiveness. Sequences AAW6561-68 represent synthetic
CC epitopes from the fibronectin binding domains DU and D1-D4 of the S.

CC Adherence of oral pathogens, particularly to tooth surfaces, can be
CC prevented by application of a fibronectin binding protein or polypeptide.
CC The fibronectin binding protein or polypeptide is useful in the
CC manufacture of oral hygiene compositions, eg. toothpaste, liquid
CC dentifrice, mouthwash or lozenge. They are useful to prevent the plaque-
CC related development of carious lesions, gingivitis, calculus or
CC periodontal disease and to combat oral cavity infections, e.g.
CC candidiasis. They may also be useful in oral surgery e.g. in guided
CC tissue regeneration procedures to prevent subsequent bacterial infection,
CC and for irrigation of periodontal pockets. This sequence corresponds to
CC amino acids 709-838 of the D1-D4 fibronectin binding domain of
CC Staphylococcus aureus

XX

CC The invention provides bovine herpes virus-2 (BHV-2) based vectors that

CC comprise at least one cytokine-encoding DNA sequence. The expression of

CC cytokines in mammals can up-regulate immune responses to the immunogens.

CC The cytokine is selected from interleukins (IL), colony stimulating

CC factors (CSF), interferons (IFN) and tumour necrosis factors (TNF). The

CC BHV-2 based vector or recombinant virus can be used as vaccines. They can

CC be used for preventing or treating a mucosal disease in a subject, e.g.

CC runtaants, cattle, sheep, goats, dogs, cats, horses, or man, particularly

CC mastitis in cows or breast cancers in humans. They can also be used for

CC preventing or treating a stress-induced disease. The present sequence

CC represents a S. aureus fibronectin binding protein binding domain

CC sequence FnBAB, the gene cloned for use in this invention. The gene has

CC 97.8 percent identity when compared to the previously published sequences

CC FnBA and FnBB

XX This protein comprises Staphylococcus aureus fibronectin-binding
 CC microbial surface component recognising adhesive matrix molecule (MSCRAMM)
 CC derivative POD, plus a vector-derived N-terminal peptide. The invention
 CC relates to claimed nucleic acid sequences (see AAT93436-38) encoding S.
 CC aureus collagen binding protein (CBP) epitopes M17, M31 and M55 (see
 CC AAW31552-54) that confer protection against S. aureus infection. CBP
 CC protein and antigenic epitopes are contemplated for use in the treatment
 CC of pathological infections, especially to prevent bacterial adhesion to
 CC collagen. The epitopes are also contemplated for use in the preparation
 CC of vaccines and as carrier proteins in vaccine formulations, as well as
 CC in the formulation of compositions for the prevention of S. aureus
 CC infection. pCF33 and POD (see AAW31556) were used to raise anti-MSCRAMM
 CC polyclonal antibodies used in passive immunisation against bovine
 CC mastitis. (updated on 25-MAR-2003 to correct PI field.) (updated on 27-
 CC AUG-2003 to correct OS field.)
